To the families of the Smyrna School District,

I want to provide clarification regarding [the notice from the Town of Smyrna](#) concerning unknown water service line materials and the potential for lead.

As required by the federal Environmental Protection Agency, the notice is part of the Town of Smyrna's ongoing effort to identify water service line materials throughout the community and was sent to all water service customers of the town. An "unknown" service line does not mean that the line contains lead; it simply means that the material has not been confirmed.

Currently, there is no indication that our schools have a lead issue with their drinking water. The Buildings and Grounds Department will continue to monitor this matter and coordinate with the appropriate water officials as additional information becomes available. Our most recent lead testing results can be found [here](#).

If there are any changes or information that directly affects our buildings, all stakeholders will be informed promptly.

Thank you for your continued cooperation and for helping us maintain a safe and healthy environment for our students and staff.

Edward K. Stover Jr
