CYBER SAFETY TRAINING - PRESENTED TO YOUR CAMPUS BY REGION 19

Region 19 is visiting high schools to equip transitioning students with the digital safety skills they need for success. Our interactive, customizable Cyber Safety classes support students receiving special education services as they prepare for the workforce—empowering them to make confident, safe choices across all online platforms.

OUR TWO PART SERIES INCLUDES:

SOCIAL MEDIA DANGERS

Students learn how oversharing online, talking to strangers, posting risky content, and falling for deepfakes can lead to privacy issues, bullying, and unsafe situations. They are also taught how to spot deepfake videos and images by looking for unnatural movements, distorted backgrounds, and inconsistencies in facial expressions or audio.

CREATING STRONG PASSWORDS

Students discover how to build strong, unique passwords using passphrases, symbols, and numbers to keep their accounts safe from hackers. They also learn the importance of protecting and enforcing their login information—never sharing passwords, enabling multi-factor authentication, and keeping their credentials secure at all times.

PERSONAL IDENTIFIABLE INFORMATION (PII)

We teach students what personal information is (like their name, address, school, or phone number) and why it must be protected from strangers online.

IDENTIFYING PHISHING EMAILS

Students learn to spot fake emails, suspicious links, and scam messages designed to steal their information.
