

AGENDA

Safety Council

Meeting Room 1

June 16, 2026

3:30-5:00 PM

1. HVAC in Park Road Gymnasium – Mary
 - With the new renovation, the vents (transfer grills) that used to open up to the outside helped bring in unfiltered fresh air. We have upgraded the HVAC systems and those old vents were shut off because the air is unfiltered and they are no longer allowed in schools due to NYS code. Now we are bringing in air differently which is coming from outside and not necessarily from returned air. Therefore, if it is 90 degrees outside, it is actually making it hotter. We are looking into air conditioning the gyms at the high schools with the next capital project which was approved but it still takes a few years for action. Long term goals are to get A/C in all gyms.
2. Outdoor Equipment coverings - ACE
 - Student hit their head during recess on the metal pole of a basketball hoop. The group discussed if padding/coverings should be put on items outside. The team agreed this was not feasible for all outside areas.
3. Online form – Barker Road- One was completed but not responded to. It seems as though there is a glitch because it was never received.
4. Round table – RocTac – Pittsford does have a connection with this taskforce if needed.
5. Committee Survey – reminder to complete it this week
