

## **Make-Up Work Following an Absence**

Students are responsible for completing work missed due to an absence and should review ProgressBook, Google Classroom, and other teacher-provided resources upon returning to school.

**Make-Up Time:** Unless otherwise arranged with the teacher, students will be allowed one school day for each school day absent to complete work assigned during the absence. For absences of five or more consecutive school days or other unusual circumstances, teachers may establish a reasonable alternative timeline.

**Previously Assigned Work:** An absence does not automatically extend the deadline for work assigned before the absence. Work assigned prior to the absence and due while the student was absent is due upon the student's return.

**Tests and Major Assignments:** Tests, quizzes, projects, presentations, or other major assessments announced or scheduled before the absence should be completed upon the student's return unless additional time is provided by the teacher. If the assessment or assignment was introduced during the absence, the regular make-up timeline applies.

**Unexcused Absences:** Students are expected to complete academic work missed because of an unexcused absence; however, credit for completed work is not guaranteed. Completing the work does not excuse the absence or eliminate attendance or disciplinary consequences.

**In-School Restrictions and Suspensions:** Students assigned to in-school restriction or out-of-school suspension are expected to complete missed academic work and may receive credit. Unless otherwise arranged, work is due upon the student's return.

Some classroom activities may not be reasonably recreated. When appropriate, the teacher may provide an alternative method for demonstrating the required learning. An alternative is not required when no reasonable substitute exists.

Teachers and administrators may provide reasonable extensions or alternative arrangements based on the length or circumstances of the absence, the nature of the assignment, documented student needs, or other extenuating circumstances.

## **Smart Glasses and Wearable Technology**

Smart glasses, AI-enabled glasses, camera glasses, and other wearable devices capable of recording, communicating, accessing the internet or AI, or receiving or displaying information are considered electronic communication devices.

Students are prohibited from wearing or using these devices during the school day and must be powered off and stored out of sight in accordance with already established policies related to electronic devices. Use of these devices that violate other provisions of the Student Handbook will be addressed under the applicable handbook rule.
