

Graduation Needs and Graduation Projections

- The senior cohort includes 140 actively enrolled students as of 10/9/26.
- It originally contained 179 active students (reduced by transfers out, dropouts, etc.)
 - Dropouts, long term absences, etc. are not excluded from accountability calculations, but transfers out are. 150 is our current denominator for this cohort.
- It includes 1 ISAEP student seeking their GED and 1 who already completed it.
- 52 of the actively enrolled students in the cohort are in need of one or more verified credits (SOL, or substitute test, Locally Awarded Verified Credit, or Special Permission Locally Awarded Verified Credit) to graduate with a Standard or Advanced Studies Diploma by Summer 2026.
- 6 students from the senior cohort could potentially have all requirements fulfilled in order to graduate in January 2027 (contingent on currently enrolled coursework as well as the establishment of division processes to support case-by-case early graduation).
- 128 students from the senior cohort are expected to graduate in June 2027.
- 2 students from the senior cohort are expected to graduate in Summer 2027.
- 4 students from the senior cohort are expected to complete an Applied Studies Diploma.
- $136/150 = 91\%$ of the accountability-defined senior cohort is currently projected to graduate by the end of summer 2027 with a Standard or Advanced Diploma.
