Stormwater Tips

Animal Waste

Animal waste left on the ground can wash harmful bacteria and parasites down storm drains and into public waterways. These bacteria can harm aquatic life and water quality.

We Need Your Help To:

- Bring bags to collect your pet's waste everywhere you go. Never leave bagged waste on the ground, in parks, or near storm drains.
- Always dispose of your pet's waste in the trash. Avoid composting or burying pet waste in your backyard or garden, as this can introduce harmful bacteria and excess nutrients.
- Enjoy wildlife from afar. Do not feed wild animals or birds, as this can cause them to gather in large numbers and produce higher volumes of waste.

To learn more about stormwater, go to your district or college's webpage and search for the Storm Water Management Plan
