Albemarle County Public Schools

ENROLLMENT PROJECTIONS REPORT

BY SCHOOL OF ATTENDANCE

October 21, 2026

EXECUTIVE SUMMARY

Introduction

The enrollment projections by school of attendance for the Albemarle County Public Schools included in this report were developed using the cohort survival methodology and Woolpert's custom enrollment projection software, S.T.E.P. [Student Trends & Enrollment Projections]. This custom software was developed in collaboration with The Ohio State University and is based on industry-best practices as well as the national experience Woolpert has with schools, school districts/divisions, and state agencies.

The Albemarle County Public Schools serves 13,478 students in 15 elementary schools, 5 middle schools, 3 high schools, a post high school, and one community lab school in the 2026-27 school year.

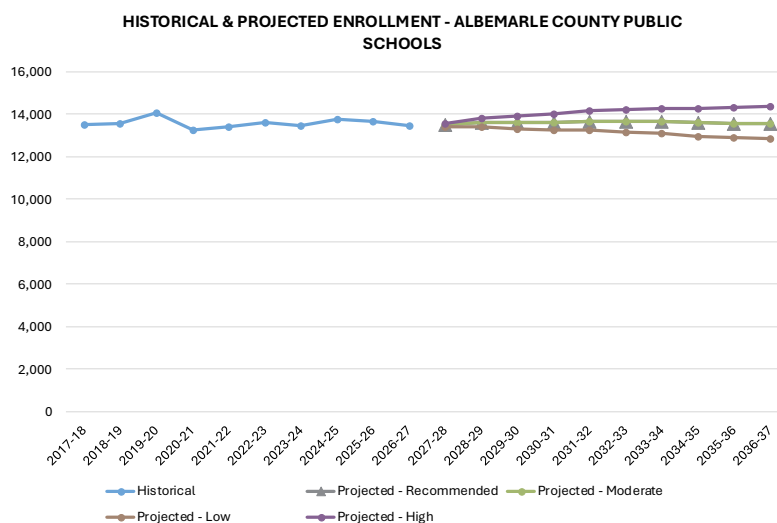

The projections presented in this report are meant to serve as a planning tool for the future, representing the most likely direction of the Division. Enrollment projections were developed using the cohort survival methodology and by analyzing the following data outlined in this report:

- Historical enrollment by school, by grade, by year
- Historical enrollment by boundary, by grade, by year
- Resident live birth data
- Census data
- Building permits
- Economic development information

Woolpert reviewed publicly available information related to Albemarle County's economic development, including data and reports available through the County's website. This review provided context regarding current and planned residential growth, employment trends, and development activity that may influence future school-age population and enrollment patterns. Such information was considered alongside historical enrollment trends, demographic characteristics, housing data, and other local factors in developing the projections.

Our Findings

Enrollment in the Albemarle County Public Schools has decreased by 63 K-12 students from the 2017-18 to the 2026-27 school year. Based on the cohort survival methodology, enrollment is projected to increase slightly over the next ten years.

Key Takeaways

- Modest division-wide growth is projected over the next decade.
- Population growth in Albemarle County is being offset by an aging demographic profile and slower growth in school-age population.
- Housing development and migration patterns should continue to be monitored, but there is no indication of major enrollment surges at the division-wide level.
- The greatest planning value of this study may be understanding where students will shift among schools rather than preparing for significant overall division-wide growth.

Overall, the findings point to stable division-wide enrollment, with modest growth and localized shifts shaping future planning needs. Continued monitoring of demographic, housing, and migration trends will help the Division plan for changes as new trends emerge.

Variables to Consider

As with any projection, the Division should pay close attention to the variables associated with determining enrollment projections discussed in this document. Any one or more of these factors can increase or decrease enrollment within the Albemarle County Public Schools. When projecting future enrollments, it is vital to track the number of live births, the amount of new housing activity, and the change in household composition. It is recommended that the data contained in this report should be reviewed on an annual basis to determine how more recent trends and any new housing development will impact the enrollment. In addition, any of the following factors could cause a significant change in projected student enrollment:

Boundary adjustments

New school openings

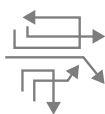

School closures

Changes/additions in program offerings

Preschool programs

Policy changes

Changes in grade configuration

Interest rates/
unemployment shifts

Intra- and
inter-district transfers

Zoning changes

Annexations

Magnet/charter/private school
openings or closures

Unplanned new
housing activity

Planned, but not
built, housing

School voucher
programs

Transportation
policy changes

Pandemics

Housing affordability

Obviously, certain factors can be gauged and planned for far better than others. For instance, it may be relatively straightforward to gather housing data from local builders regarding the total number of lots in a planned subdivision and calculate the potential student yield. However, planning for changes in the unemployment rate, and how these may either boost or reduce public school enrollment, proves to be more difficult. In any case, it is essential to gather a wide variety of information in preparation for producing enrollment projections.

When looking ahead at a school district/division's enrollment over the next two, five, or ten years, it is helpful to approach the process from a global perspective. For example: How many new homes have been constructed each year? How many births have occurred each year in relation to the resident population? Is housing experiencing a turnover—if so, what is the composition of families that are moving in/out? Are more or less students attending private schools or being home -schooled? What has the unemployment rate trend been over the past ten years? What new educational policies are in place that could affect student enrollment figures?

The cohort survival methodology is a standard methodology used throughout the educational planning industry to project enrollment. The enrollment projections developed for the Albemarle County Public Schools were developed using the cohort survival method.

A top-down view of several children sitting on a grey carpeted floor, engaged in drawing. They are using various colored pencils and markers on large sheets of paper. One child in the top left is wearing a blue shirt and is focused on their drawing. Another child in the top right is wearing a pink shirt. In the bottom left, a child in a red shirt is visible. In the bottom right, a child in a white shirt is drawing. The papers are scattered around them, some showing simple line drawings of figures and shapes.

Acronyms / Definitions

ACS: American Community Survey; an annual survey conducted by the U.S. Census Bureau that collects and compiles social, housing, economic, and demographic data from samples of the U.S. population

Block Group: A statistical district of a census tract, generally defined to contain between 600 and 3,000 people and 240 and 1,200 housing units, and the smallest geographic unit for which the Census Bureau tabulates sample data.

Capacity: the number of students a school is able to serve based on programs delivered, class sizes, and count of classrooms

CCD: Census County Subdivision – the primary divisions of a county (according to the U.S. Census Bureau), and can include towns, townships, districts, etc.

CDP: Census Designated Place – areas such as cities, towns, boroughs, villages, and other less common entities. Census places can and do cross county and county subdivision boundaries.

Cohort Survival Method: a process that uses historic live birth data and historic student enrollment to “age” a known population or cohort throughout the school grades to project enrollment the next year(s)

Enrollment Projection: a data-driven forecast of future student enrollment over a specified planning horizon

Esri: Environmental Systems Research Institute, Inc. - a notorious American multinational company specializing in Geographic Information Systems (GIS) software

Geocoding: the process of converting an address to a point on a map for the purposes of mapping and spatial analysis

Live Birth Count: the actual number of live births

Live Birth Rate: the number of births per 1,000 women in a specified population group

Resident Live Births: the number of live children born to residents of a particular geographic area, regardless of where that birth took place

SOCDS: State of the Cities Data Systems (A U.S. data repository providing detailed demographic, economic, and municipal statistics for metropolitan areas, central cities, and suburbs)

Statistical Distributional Theory: the branch of statistics that analyzes the variability and probability of future outcomes based on observed historical patterns

S.T.E.P.: Student Trends and Enrollment Projections

Survival Ratio: the number of students in a grade (ie. first grade) divided by the number of students in the subsequent grade (ie. second grade) the following school year

Utilization: the number of students enrolled in a school divided by that school’s capacity

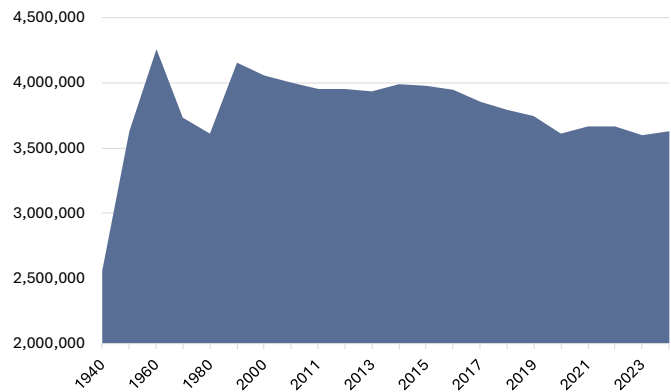

NATIONAL TRENDS

Historical Trends in Live Births

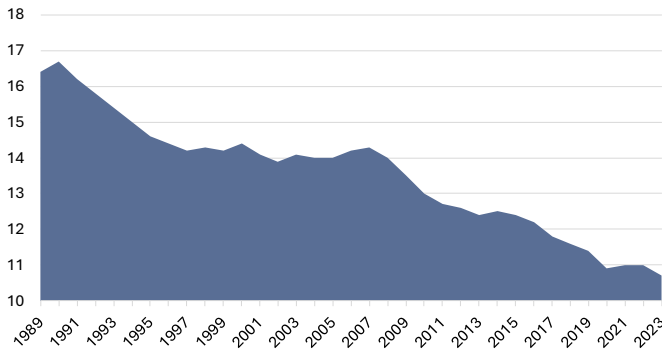

Tracing the landscape of the country's public-school enrollment back over the past fifty years reveals demographic, economic, and social changes. The United States as a whole continues to undergo major shifts in public student enrollment, due in large part to past events including the baby boom, the availability and use of birth control, and the development of suburbs. The baby boom of the late 1940s and 50s was followed by the baby bust of the 1960s and 70s. This gave rise to the echo baby boom of the 1980s.

U.S. TOTAL LIVE BIRTHS

Source: CDC, National Vital Statistics Report

U.S. POPULATION- LIVE BIRTH RATE
PER 1,000 POPULATION

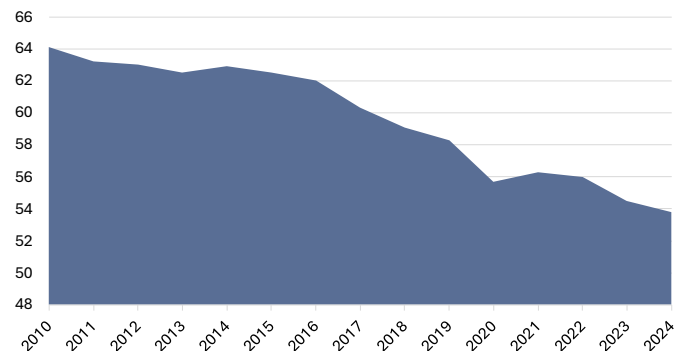

Source: CDC, National Vital Statistics Report

Nationwide, districts/divisions have experienced the effects of the echo baby bust of the 1990s. From the 1950s to the 1970s, a dramatic downsizing of the family unit occurred. A direct result was the declining school enrollment of the 1970s and 1980s. As of the 2024 American Community Survey (ACS) 1-Year Estimates, the average family size was 3.11 persons. The live birth rate has descended since 2008 and reached an all-time low of 10.7 (per 1,000) in 2023.

Since 2010, the fertility rate among women aged 15-44 dropped from 64.1 to 53.8 (per 1,000) in 2024.

U.S. POPULATION- FERTILITY RATE
PER 1,000 WOMEN AGED 15-44

Historical Trends in Population

The U.S. Census provides a consistent long-term view of population change, making it an important reference point for understanding broader demographic trends that influence school enrollment planning. Nationally, population growth has continued over time, although the pace of growth has slowed in recent decades. From the 2010 Census to the 2020 Census, the total population of the United States increased by 7 percent, reflecting continued growth but at a more moderate rate than in prior periods.

Source: U.S. Census

Source: U.S. Census

At the state level, Virginia experienced continued population growth between the 2010 and 2020 Census counts. Over this period, the state's total population increased by approximately 8 percent, outpacing the national growth rate of 7 percent. This growth indicates a generally expanding demographic environment across Virginia, though the pace and location of growth likely vary by region and are influenced by local housing development, migration patterns, household composition, and employment opportunities.

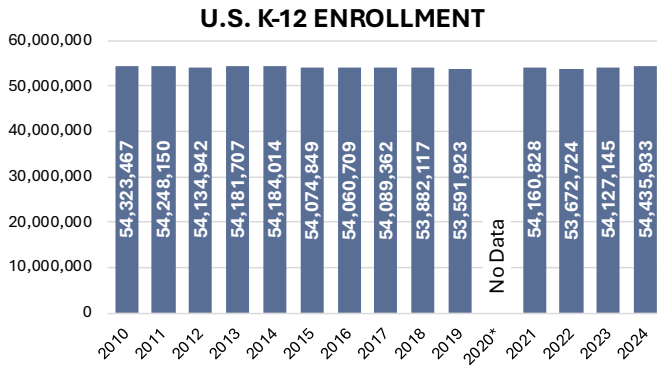

For school districts/division, these broader population trends provide useful context but should be considered alongside local indicators, including resident live births, housing activity, age composition, and recent enrollment patterns. While national and state trends help frame the overall demographic landscape, local conditions within and around the Division boundary are more directly tied to future student enrollment.

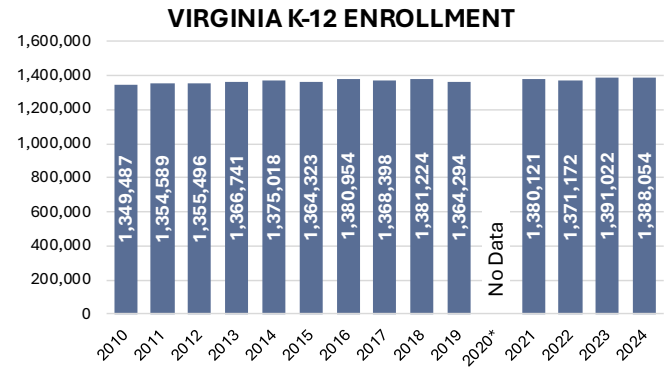

Historical Trends in K-12 Enrollment

According to the American Community Survey (ACS) 1-Year Estimates, K-12 enrollment in the U.S. has hovered around 54 million students since 2010. In 2024, it was estimated that there were 54,435,933 students in grades K-12. It should be noted that due to the COVID-19 pandemic in 2020, 1-Year ACS data for 2020 is not available.

K-12 enrollment in the state of Virginia has hovered just below 1.4 million students since 2010. In 2024, it was estimated that there were 1,388,054 students in grades K-12.

Source: U.S. Census - American Community Survey 1-Year Estimates

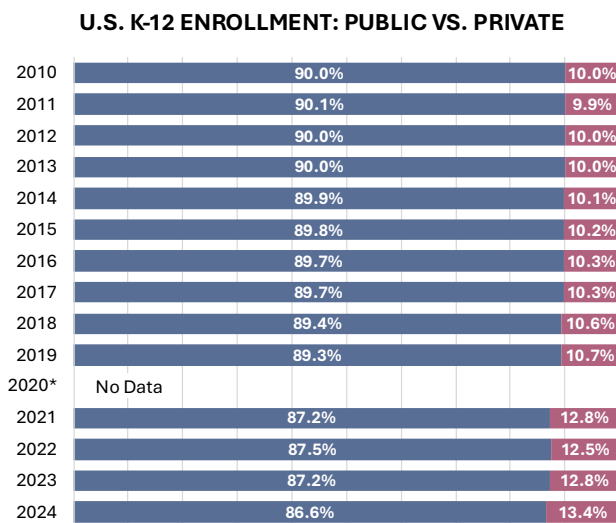

Source: U.S. Census - American Community Survey 1-Year Estimates

From 2010 to 2019, U.S. public school enrollment in grades K-12 hovered around 90% while private school enrollment hovered around 10 percent. Since 2020, public school enrollment decreased while private school enrollment increased. In 2024, it was estimated that, of the K-12 students enrolled in schools in the U.S., 87% were enrolled in public school and 13% were enrolled in private school.

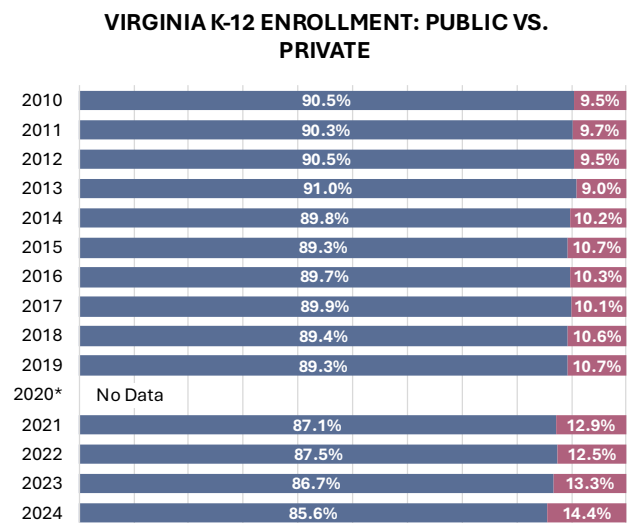

From 2010 to 2019, Virginia public school enrollment in grades K-12 hovered around 90% while private school enrollment hovered around 10 percent. Since 2020, public school enrollment decreased while private school enrollment increased. In 2024, it was estimated that of the K-12 students enrolled in schools in Virginia, 86% of students were enrolled in public school and 14% were enrolled in private school.

It should be noted that home-schooled children are counted in the private school data; the ACS does not distinguish between charter and non-charter schools; and if anyone in these age groups had not attended any school in the 3 months before the survey was conducted, they were considered to not be enrolled in any school.

METHODOLOGY

Cohort Survival Method

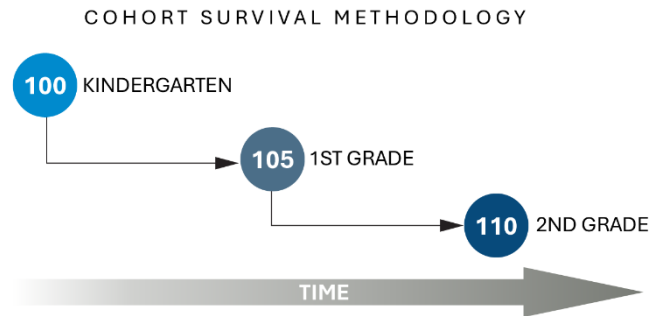

The cohort survival methodology (sometimes referred to as the grade progression ratio method) is a widely used enrollment projection model that is used by many school districts/divisions and state and federal agencies to project K-12 enrollment.

A cohort is a group of persons [in this case, students]. The cohort survival enrollment projection methodology uses historic live birth data and historic student enrollment to “age” a known population or cohort throughout the school grades. For instance, a cohort begins when a group of kindergarteners enroll in grade K and moves to first grade the following year, second grade the next year, and so on.

A “survival ratio” is developed to track how this group of students increased or decreased in number as they moved through the grade levels. By developing survival ratios for each grade transition [i.e. 2nd to 3rd grade] over a ten-year period, patterns emerge. A projection ratio for each grade transition is developed based on analysis of the survival ratios. The projection ratios are used as a multiplier in determining future enrollment.

For example, if student enrollment has consistently increased from the 8th to the 9th grade over the past ten years, the survival ratio would be greater than 100% and could be multiplied by the current 8th grade enrollment to develop a projection for next year’s 9th grade. This methodology can be carried through to develop ten years of projection figures. Because there is not a grade cohort to follow for students coming into kindergarten, resident live birth counts are used to develop a birth-to-kindergarten survival ratio. Babies born five years previous to the kindergarten class are compared in number, and a ratio can be developed to project future kindergarten enrollments.

The cohort survival method is useful in areas where population is stable [relatively flat, growing steadily, or declining steadily], and where there have been no significant fluctuations in enrollment, births, and housing patterns from year to year. The cohort survival methodology inherently considers the net effects of factors such as migration, housing, dropouts, transfers to and from charter schools, open enrollment, and deaths. This methodology does not assume changes in policies, program offerings, or future changes in housing and migration patterns.

BACKGROUND DEMOGRAPHICS

U.S. Census

This section presents data from the United States Census Bureau and estimates from the American Community Survey (ACS) to demonstrate the demographic characteristics and historic trends of the population within the Division boundary.

The U.S. Census collects official snapshot population counts every 10 years based on a person's usual residence on the Census count date; the resulting data is used for congressional apportionment; redistricting of congressional, state legislative, and local voting districts; federal funding allocation; and community planning.

In tandem, the American Community Survey sends out monthly surveys collecting social, housing, educational, occupational, financial, and other demographic and economic data based on the survey respondents' current residence and compiles it yearly. This ACS data helps public officials, federal/ state/local agencies, school districts/divisions, etc. assess historic trends and plan for the future.

Data is provided by school division boundary, county boundary, Census county subdivision boundary, and Census place boundary. The Census Bureau defines county subdivisions as "the primary divisions of a county," and can be called towns, townships, districts, or other names. If a township or other entity crosses a county boundary, data is provided for each segment of the locality in each county. Census places can include cities, towns, boroughs, villages, and other less common entities. Census places can and do cross county and county subdivision boundaries.

The Albemarle County Public Schools is located in Albemarle County, Virginia. It serves parts or all of the following localities:

Census County Subdivisions:

- Jack Jouett District
- Rio District
- Rivanna District
- Samuel Miller District
- Scottsville District
- White Hall District

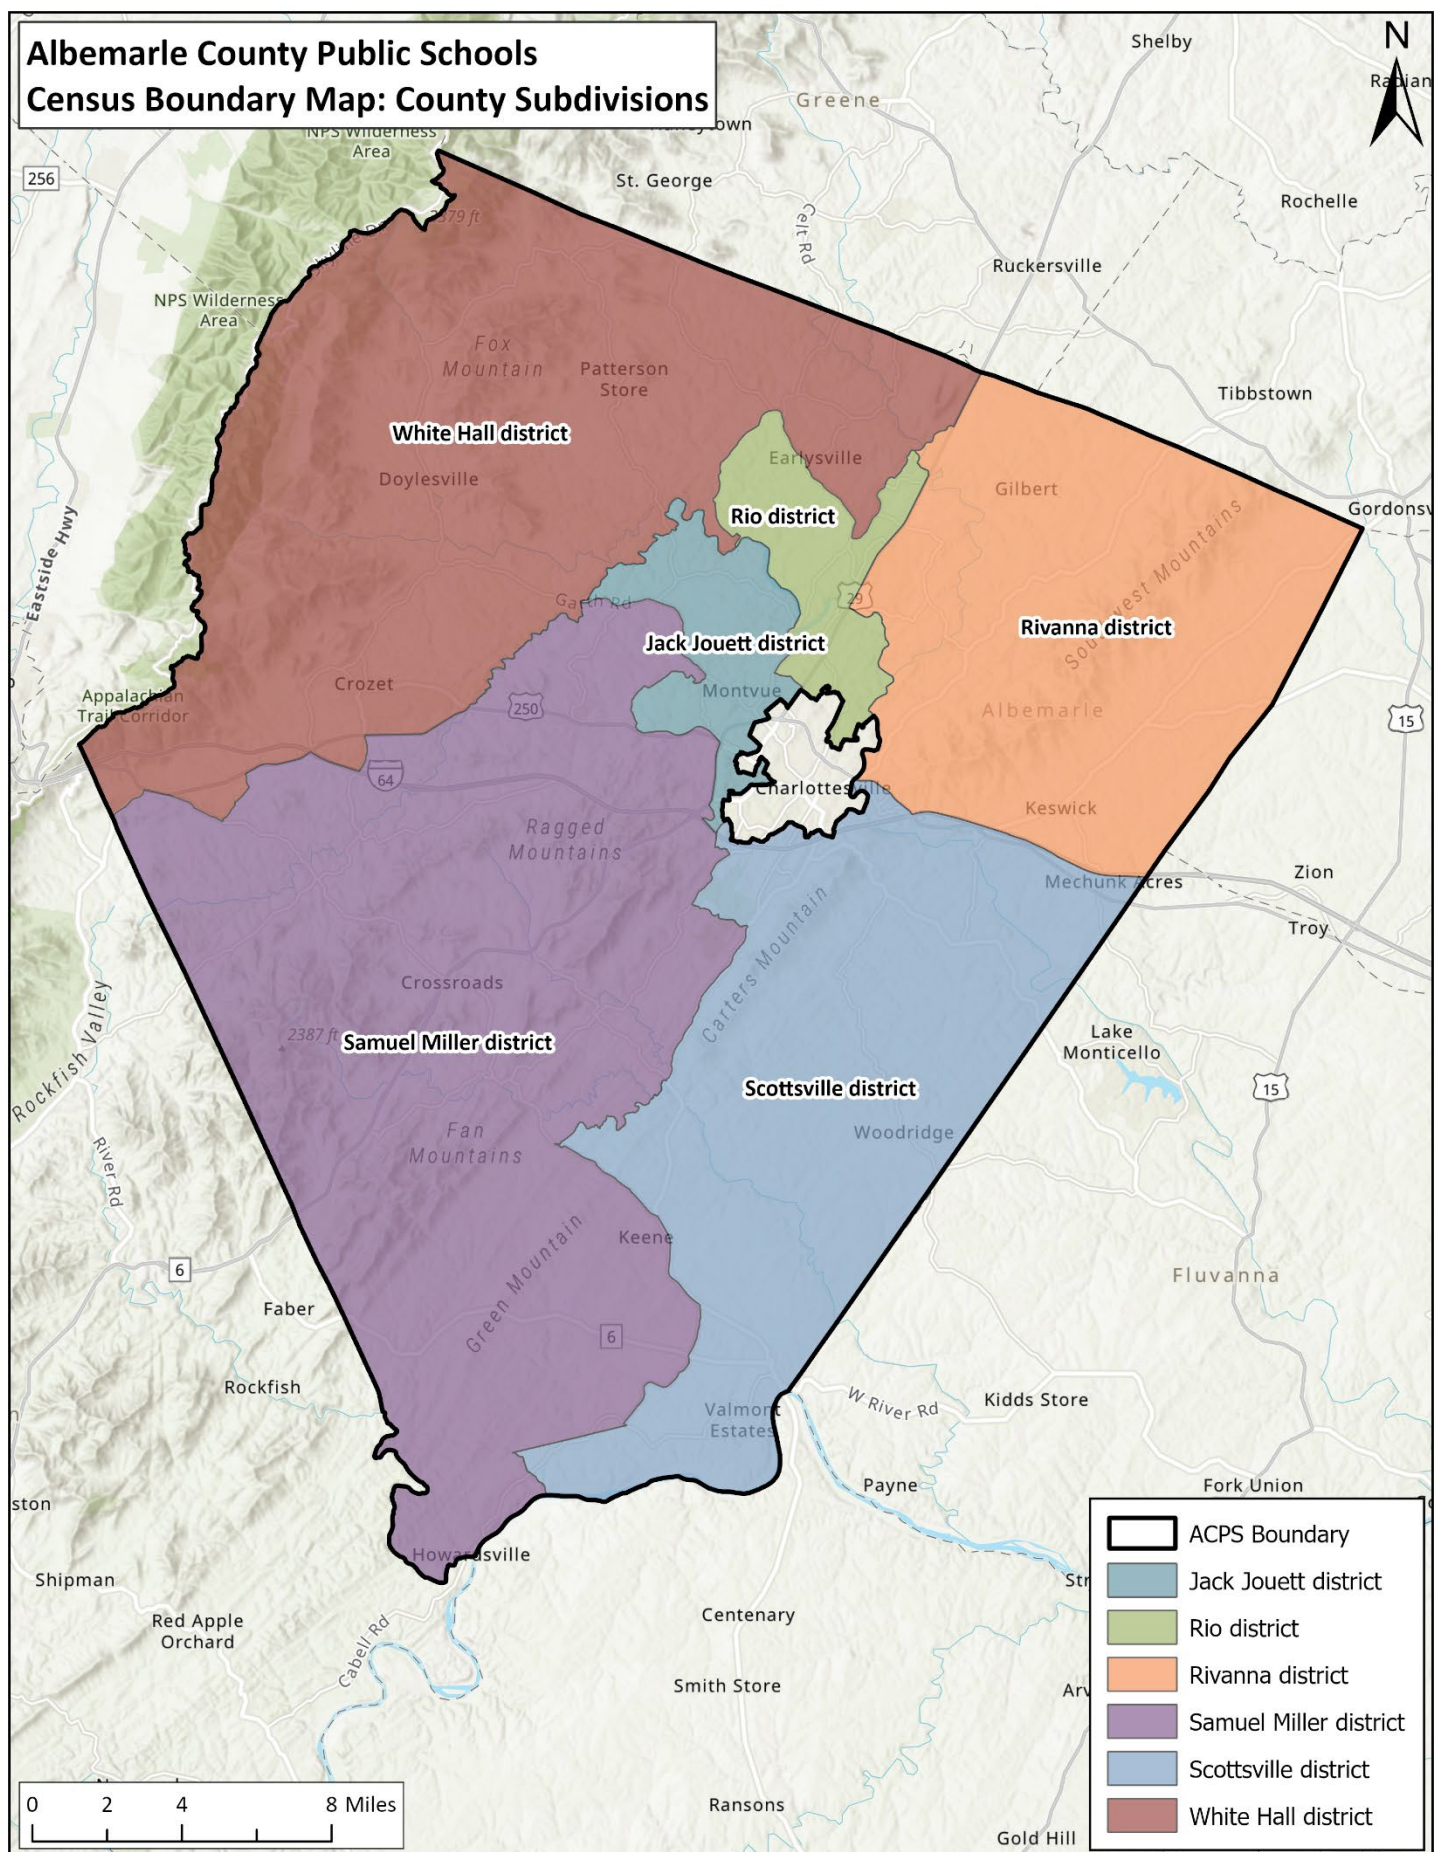

Census Places:

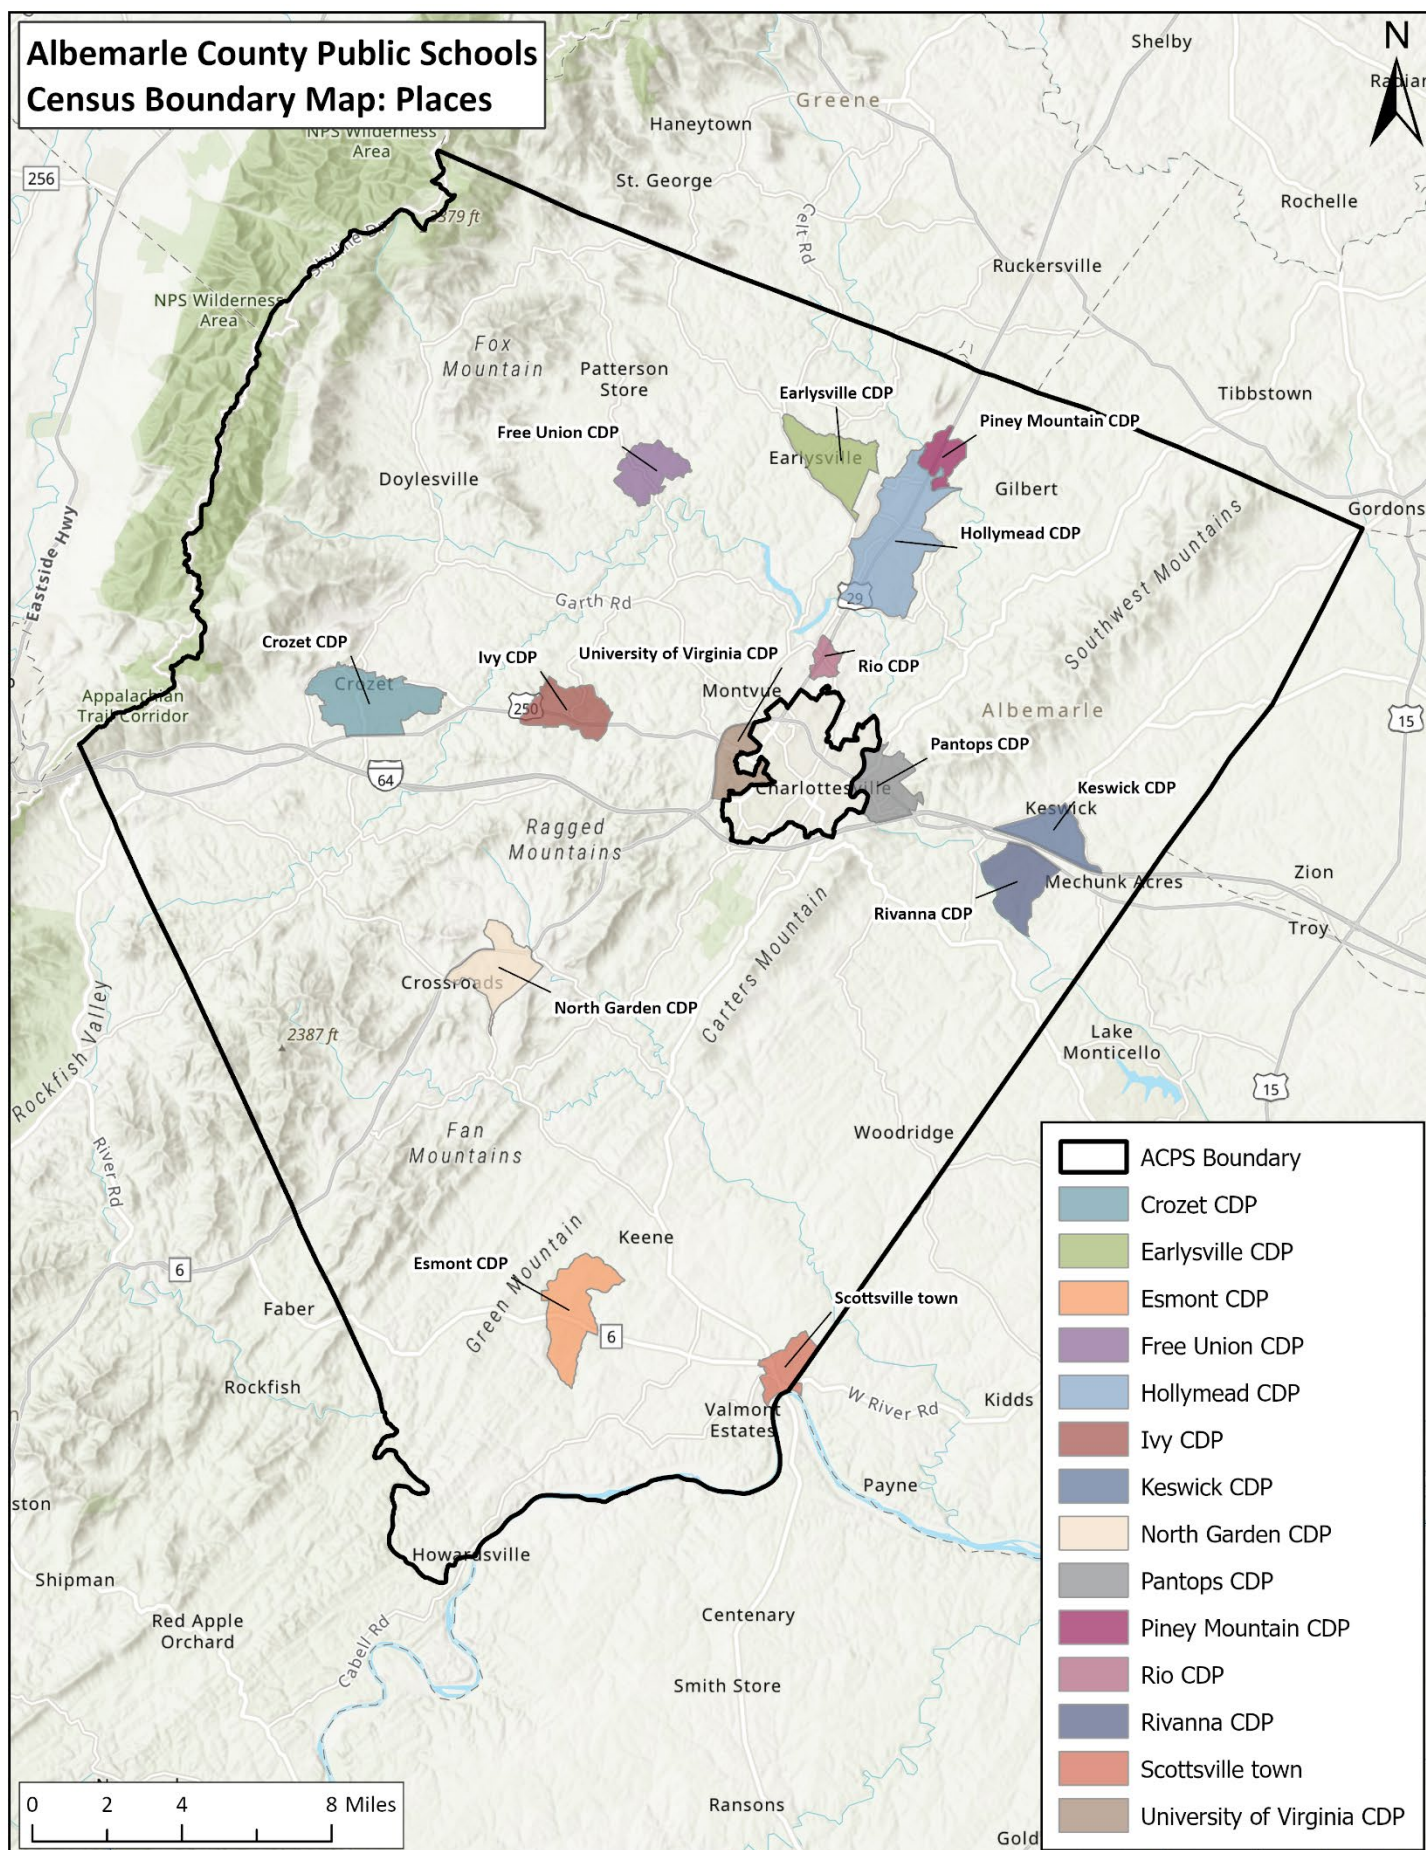

- Crozet CDP*
- Earlysville CDP*
- Esmont CDP*
- Free Union CDP*
- Hollymead CDP*
- Ivy CDP*
- Keswick CDP*
- North Garden CDP*
- Pantops CDP*
- Piney Mountain CDP*
- Rio CDP*
- Rivanna CDP*
- Scottsville town
- University of Virginia CDP*

The data on the following pages is aggregated and color-coordinated by the boundaries shown on the maps on the following two pages. The boundaries of cities/CDPs*/towns/villages may vary across the years as population and commercial activity fluctuate

**Census Designated Place*

Students by Locality

The table and pie charts below show how many Albemarle County Public Schools students live in the Division boundary and each locality served by the Division, by year, according to 2026-27 student data. The percentages for each locality are based on the total students in the Albemarle County Public Schools. The total at the bottom of the table indicates the total number of students in the Division, not the sum of the values in the table.

Historical Student Enrollment by Census Locality

Census Locality	2026-27

Distribution of Students in Census County Subdivisions

Distribution of Students in Census Places

**Other includes students living outside of the Division boundary and in localities not shown in the map on the previous page and table and pie charts above.

Population

From the 2010 Census to the 2020 Census, the total population and median age increased in the Division boundary. According to the 2024 5-Year ACS Estimates, since the 2020 Census, the total population and median age have increased in the Division boundary.

From the 2010 Census to the 2020 Census, the number of children under the age of 5 increased by 5 percent, the number of children ages 5 - 19 increased by 9 percent, the number of adults ages 20 - 64 increased by 6 percent, and the number of adults ages 65 and over increased by 54 percent in the Division boundary. According to the 2024 5-Year ACS Estimates, since the 2020 Census, the number of children under the age of 5 decreased by 2 percent, the number of children ages 5 - 19 remained relatively flat, the number of adults ages 20 - 64 increased by 1 percent, and the number of adults ages 65 and over increased by 8 percent in the Division boundary.

The 2000, 2010, and 2020 population counts and 2024 5-Year ACS Estimates are shown in the table below (continued on the following two pages).

Note: CDP = Census Designated Place

According to the ACS 1-Year estimates, the Albemarle County Public Schools boundary has experienced little growth with some decline in the number of households with one or more people under 18 years of age. The table and graph below show the trend of the last 10 years of ACS 1-Year estimates.

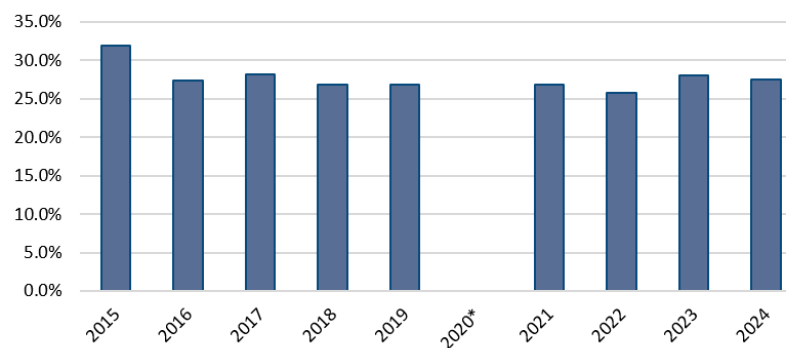

It should be noted that due to the COVID-19 pandemic, the U.S. Census Bureau was unable to reach people to participate in the 2020 American Community Survey, so estimates for 2020 were not calculated and therefore are not shown in the table and graph below.

Albemarle County Public Schools Boundary: Households with one or more people under 18 years	
2015	31.9%
2016	27.4%
2017	28.2%
2018	26.8%
2019	26.8%
2020*	-
2021	26.8%
2022	25.8%
2023	28.1%
2024	27.5%

*Data not available due to the COVID-19 Pandemic.

Albemarle County Public Schools Boundary:
Households with one or more people under 18 years

According to the 2024 ACS Estimates, the average family size and average household size are estimated to have decreased in the Division boundary since the 2010 Census.

A household consists of all persons (related and unrelated) living within a housing unit.

Note: CDP = Census Designated Place

A housing unit is a single room, house, apartment, or other group of residential rooms that have direct outside access; group quarters are excluded. A housing unit is considered to be occupied if the current resident has lived or plans to live there for two or more consecutive months. If this two-month criteria is not met, then the housing unit is considered to be vacant.

From the 2010 Census to the 2020 Census, the number of total and occupied housing units in the Division boundary has increased while the number of vacant units has decreased.

School Enrollment

The tables below summarize the percentage of the population living within the Albemarle County Public Schools boundary, by age group, enrolled in school; enrolled in school and attending public school; and enrolled in school and attending private school, based on U.S. Census American Community Survey (ACS) 1-Year estimates. Home-schooled children are counted in the private school data; the ACS does not distinguish between charter and non-charter schools. If anyone in these age groups had not attended any school in the 3 months before the survey was conducted, they were considered to not be enrolled in any school.

It should be noted that this data is not a survey of the students attending schools in the Division; rather, it is based on monthly surveys sent out by the ACS to households in the Division boundary. This survey data is then used to create the estimates shown in the tables below.

General Demographics

The following information represents population estimates, by block group, created by Esri from public and private data sources, the U.S. Census Bureau, and the U.S. Census Bureau's American Community Survey (ACS). Esri provides a yearly update to their demographic data, showing an estimate of the current population and population 5 years in the future.

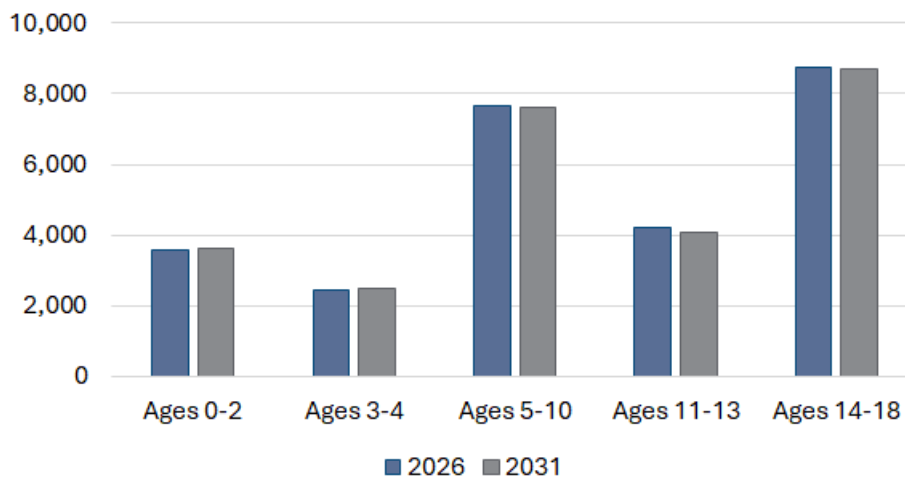

According to the ESRI estimates, the total population of Albemarle County is estimated to increase over the next five years. As illustrated in the table below, the number of children, ages 5-18, is estimated to decrease by 187 children, or approximately 1 percent.

Population Estimates - Albemarle County

Age Group	2026	2031	Change	% Change
Ages 0-2	3,582	3,634	52	1%
Ages 3-4	2,419	2,477	58	2%
Ages 5-10	7,643	7,594	-49	-1%
Ages 11-13	4,196	4,081	-115	-3%
Ages 14-18	8,747	8,724	-23	0%
Ages 5-18	20,586	20,399	-187	-1%
Total Population	120,264	125,287	5,023	4%

POPULATION ESTIMATES - ALBEMARLE COUNTY

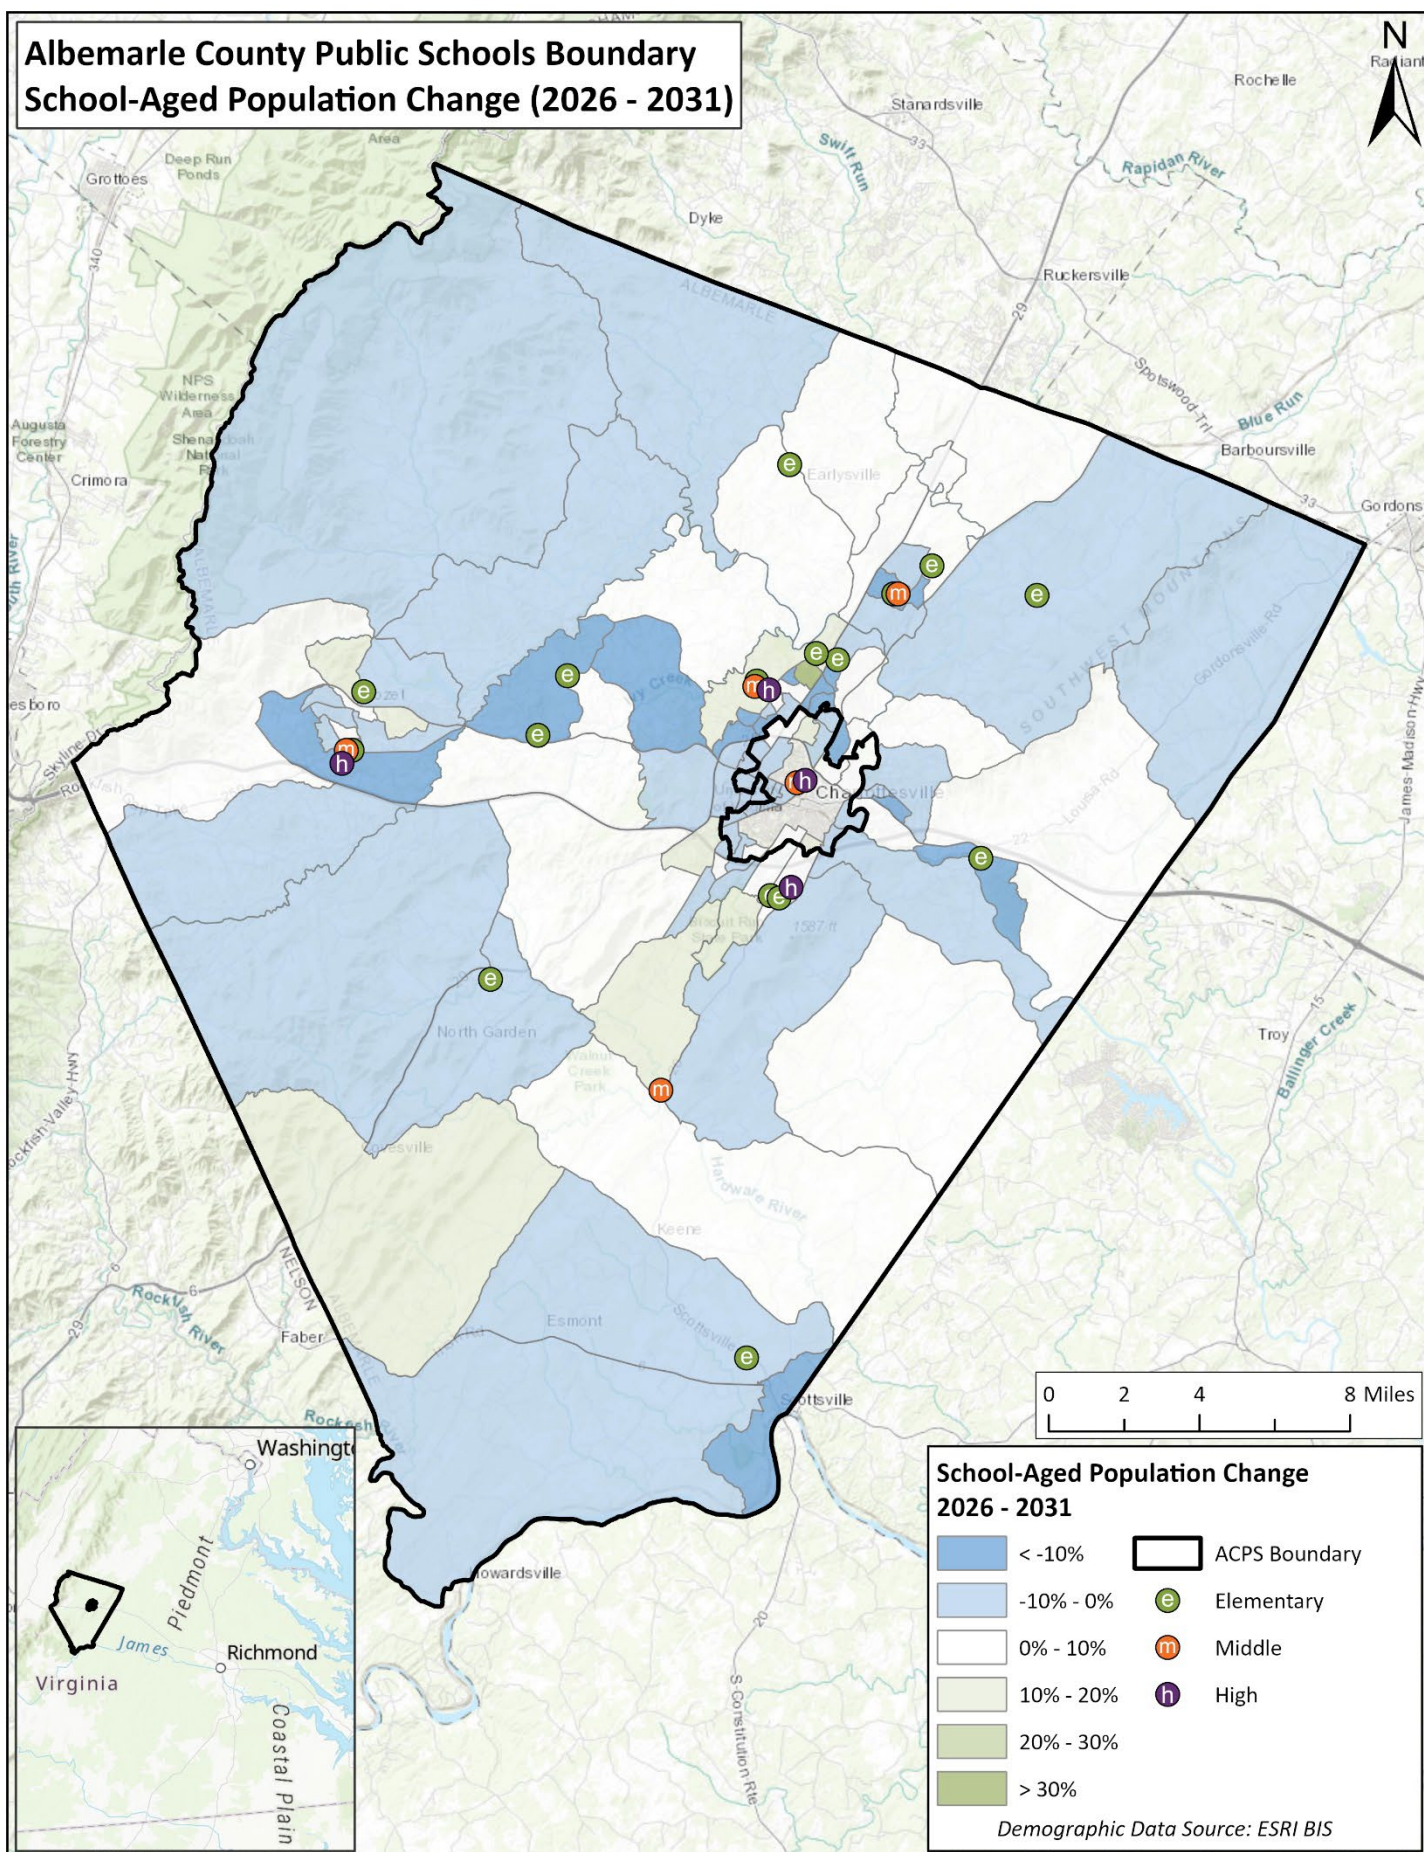

Estimated School-Aged Population Change 2026-2031

The map on the following page shows school-aged population change in the U.S. Census block groups within / around the Albemarle County Public Schools boundary. Population changes are based on 2026 and 2031 estimates.

A block group is defined by the U.S. Census Bureau as, “a statistical district of a census tract, generally defined to contain between 600 and 3,000 people and 240 and 1,200 housing units, and the smallest geographic unit for which the Census Bureau tabulates sample data.”

Housing Data

Building Permits

Housing development and building permits are tracked to determine their effect on student enrollment. The table and graph below illustrate the number of single - and multi-family building permits issued in Albemarle County since 2000.

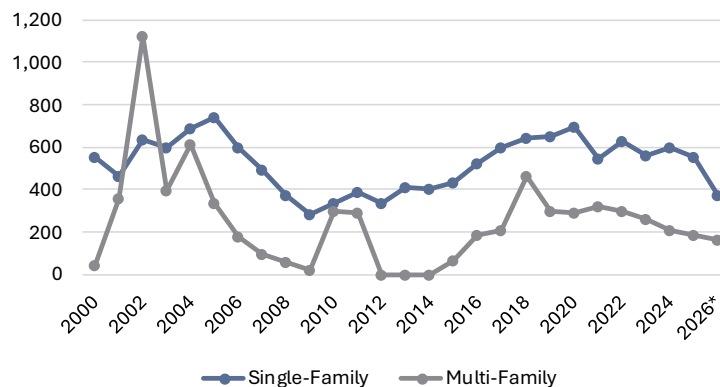

More detailed housing data can be found in the Student Potential Analysis report.

Building Permits

Year	Albemarle County

ALBEMARLE COUNTY BUILDING PERMITS

RESIDENT LIVE BIRTH DATA

Utilization of resident live birth data is recommended when projecting future kindergarten enrollments. This data provides a helpful overall trend. Large bubbles in birth counts, either up or down, can also be planned for or anticipated by the Division.

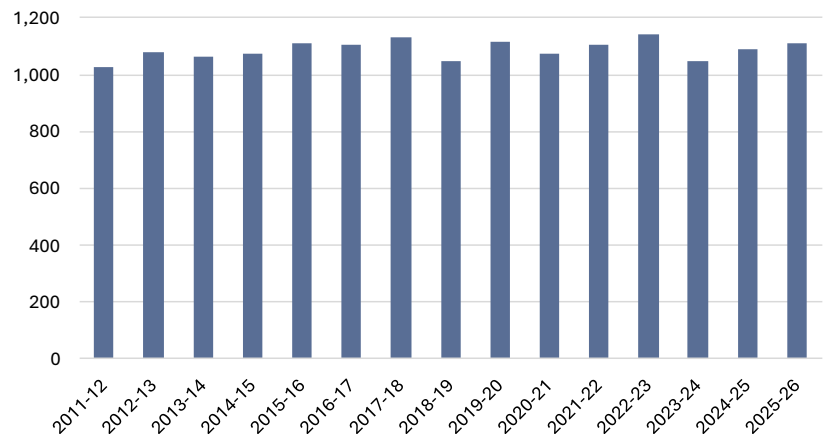

In addition, the live birth counts are used in determining a birth-to-kindergarten and birth-to-first grade survival ratio. This ratio identifies the percentage of children born in a representative area who attend kindergarten and first grade in the Division five and six years later. The survival ratios for birth-to-kindergarten, birth-to-first grade, as well as grades 1 -12 can be found on the following page of this report.

Data is arranged by the residence of the mother.

For example, if a mother lives in the Agnor ES boundary but delivers her baby in the Baker-Butler ES boundary, the birth is counted in the Agnor ES boundary. Live birth counts are different from live birth rates. The live birth count is simply the actual number of live births. A birth rate is the number of births per 1,000 women in a specified population group.

The table and graph include the resident live birth counts for the Albemarle County Public Schools.

SURVIVAL RATIOS

The chart below demonstrates the changes, by grade level, in enrollment as students have moved through the system over the last ten years. Percentages greater than 100 indicate that there are more students than there were in the previous grade the previous year. In other words, there was an increase in student population where new students were added to the system. Percentages less than 100 indicate that there was decline or students left the system. If the exact number of students in 1st grade during the 2024-25 school year were present in 2nd grade for the 2025-26 school year, the survival ratio would be 100 percent.

Birth-to-Kindergarten and Birth-to-First Grade: This ratio indicates the number of children born in the area who attend kindergarten and first grade in the division five and six years later. What is important to note is the trend in survival ratios, not necessarily the actual number.

Grades 8 to 9: The higher than usual percentage may be a result of school division promotion policies. Often in school districts/division, students are promoted from 8th to 9th grade and after one year in 9th grade do not have sufficient credits to be classified as a 10th grader and are counted again as 9th graders the following year. There may also be students who are attending private or charter schools or are home schooled through grade 8 and then attend public schools for high school education.

The COVID-19 pandemic introduced an unforeseen level of volatility, nationwide, as seen in the survival ratios for the 2019 -20 to 2020-21 and 2020-21 to 2021-22 school years. These ratios will need to be monitored closely over the next few years as new trends are established.

PROJECTED ENROLLMENT

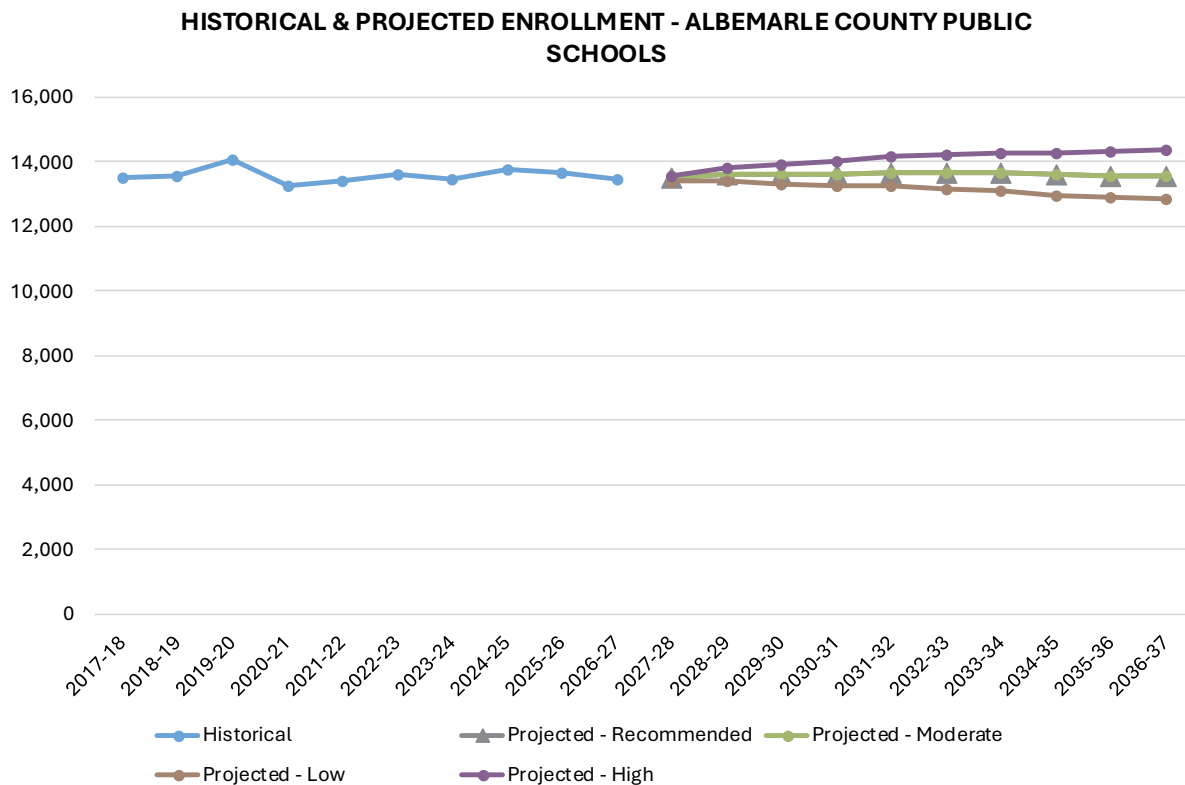

Woolpert developed low, moderate, high, and recommended enrollment projections for the Albemarle County Public Schools. The moderate enrollment projections are based on a selected average or weighted average of survival ratios, in this case a 5-year weighted average by school. This model gives greater emphasis to the most recent years, allowing the forecast to respond to changing conditions while maintaining the stability that comes from considering a longer history of enrollment data. The low and high enrollment projections are developed using statistical distributional theory, providing the Division with a more conservative (low) and more liberal (high) enrollment projection.

The recommended enrollment projection is based on a detailed analysis of historical live birth data; historical enrollment over the past 10 years, by school; and resulting survival ratios. These historical patterns were used as the foundation because they provide the strongest evidence of how students have entered, progressed through, and exited the school system over time. That baseline was then reviewed against multiple independent factors including population trends; school-age population estimates, housing and residential development activity, economic and community trends, student yields and student potential analysis, and school choice trends. Significant shifts in survival ratio patterns are realized and accounted for in determining projection ratios independently for each grade level. The recommended projection represents a balanced forecast that combines historical enrollment patterns with birth trends, demographic forecasts, housing development, economic conditions and student potential analysis.

The range of enrollment projections from low (conservative) to high (liberal) are offered due to the limitations of the cohort survival method in factoring changes to policies, program offerings, and future changes in housing and migration patterns. For example, the low enrollment projection might be used if housing declines significantly more than anticipated; the high enrollment projection might be used if housing growth increases at a more rapid rate than seen in recent years.

It should be noted that the actual live birth counts are available through 2025-26 and project kindergarten enrollment through 2030-31. To project kindergarten through 2036-37, a simple average of the last 3 years of live birth counts was used.

Projected Post High and Community Lab enrollment projections were provided by the Albemarle County Public Schools.

Projected Enrollment – Recommended

Based on the Recommended projected enrollment, K-12 enrollment in the Albemarle County Public Schools is projected to increase from 13,450 in the 2026-27 school year to 13,537 K-12 students in the 2036-37 school year.

CONCLUSION

As with any projection, the Division should pay close attention to live birth counts, enrollment in elementary schools, open enrollment, non-public enrollment, in / out migration patterns, and any housing growth. It is recommended that this document be reviewed on an annual basis to determine how more recent growth and enrollment trends will impact the enrollment projections.

Woolpert is pleased to have had the opportunity to provide the Division with this demographic study. We hope this document will provide the necessary information to make informed decisions about the future of the Albemarle County Public Schools.

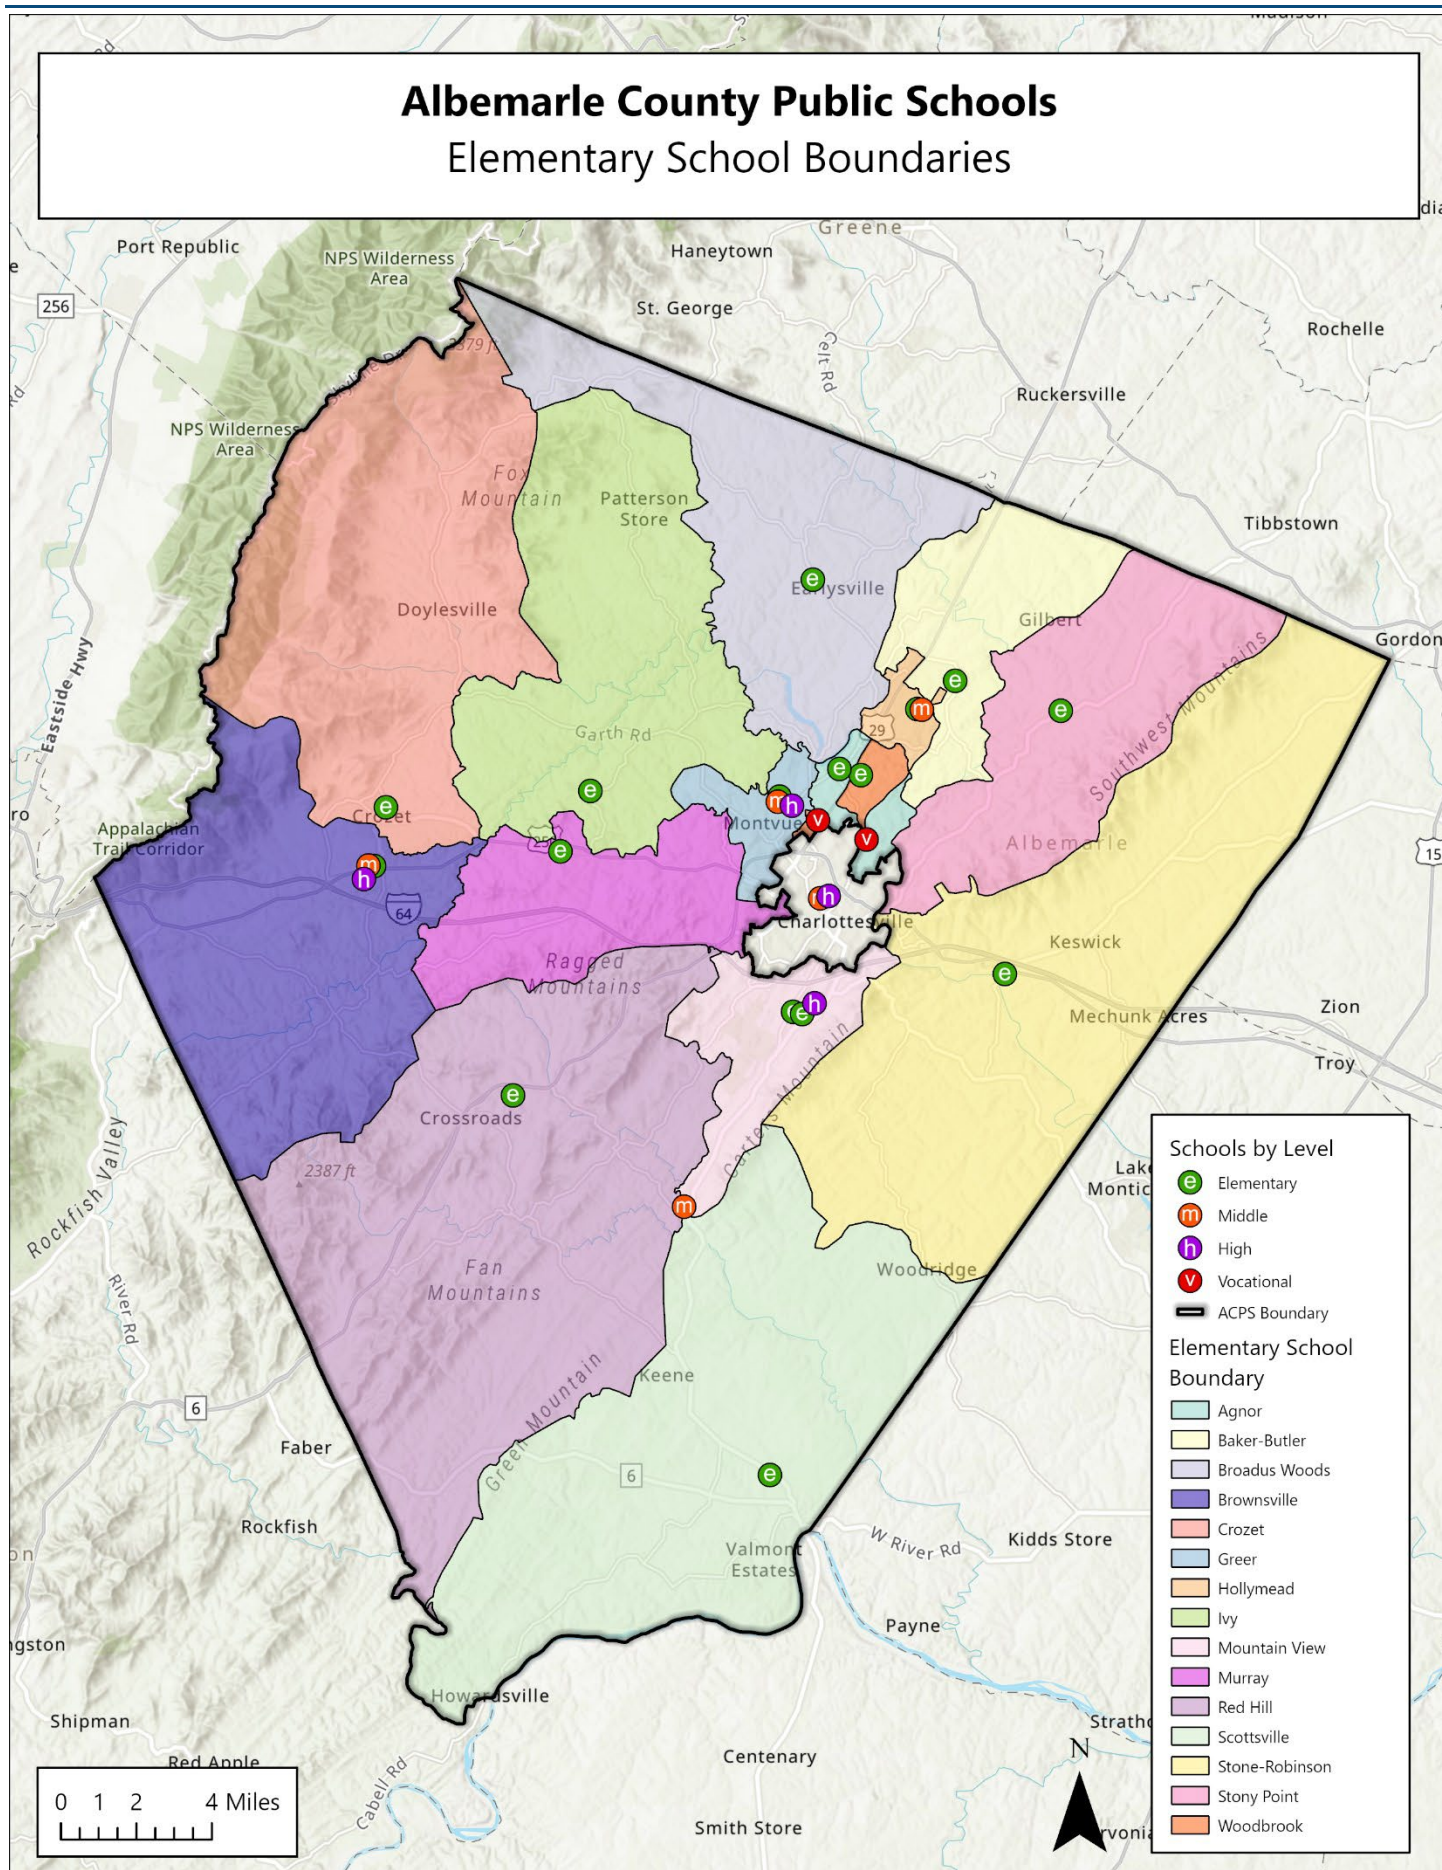

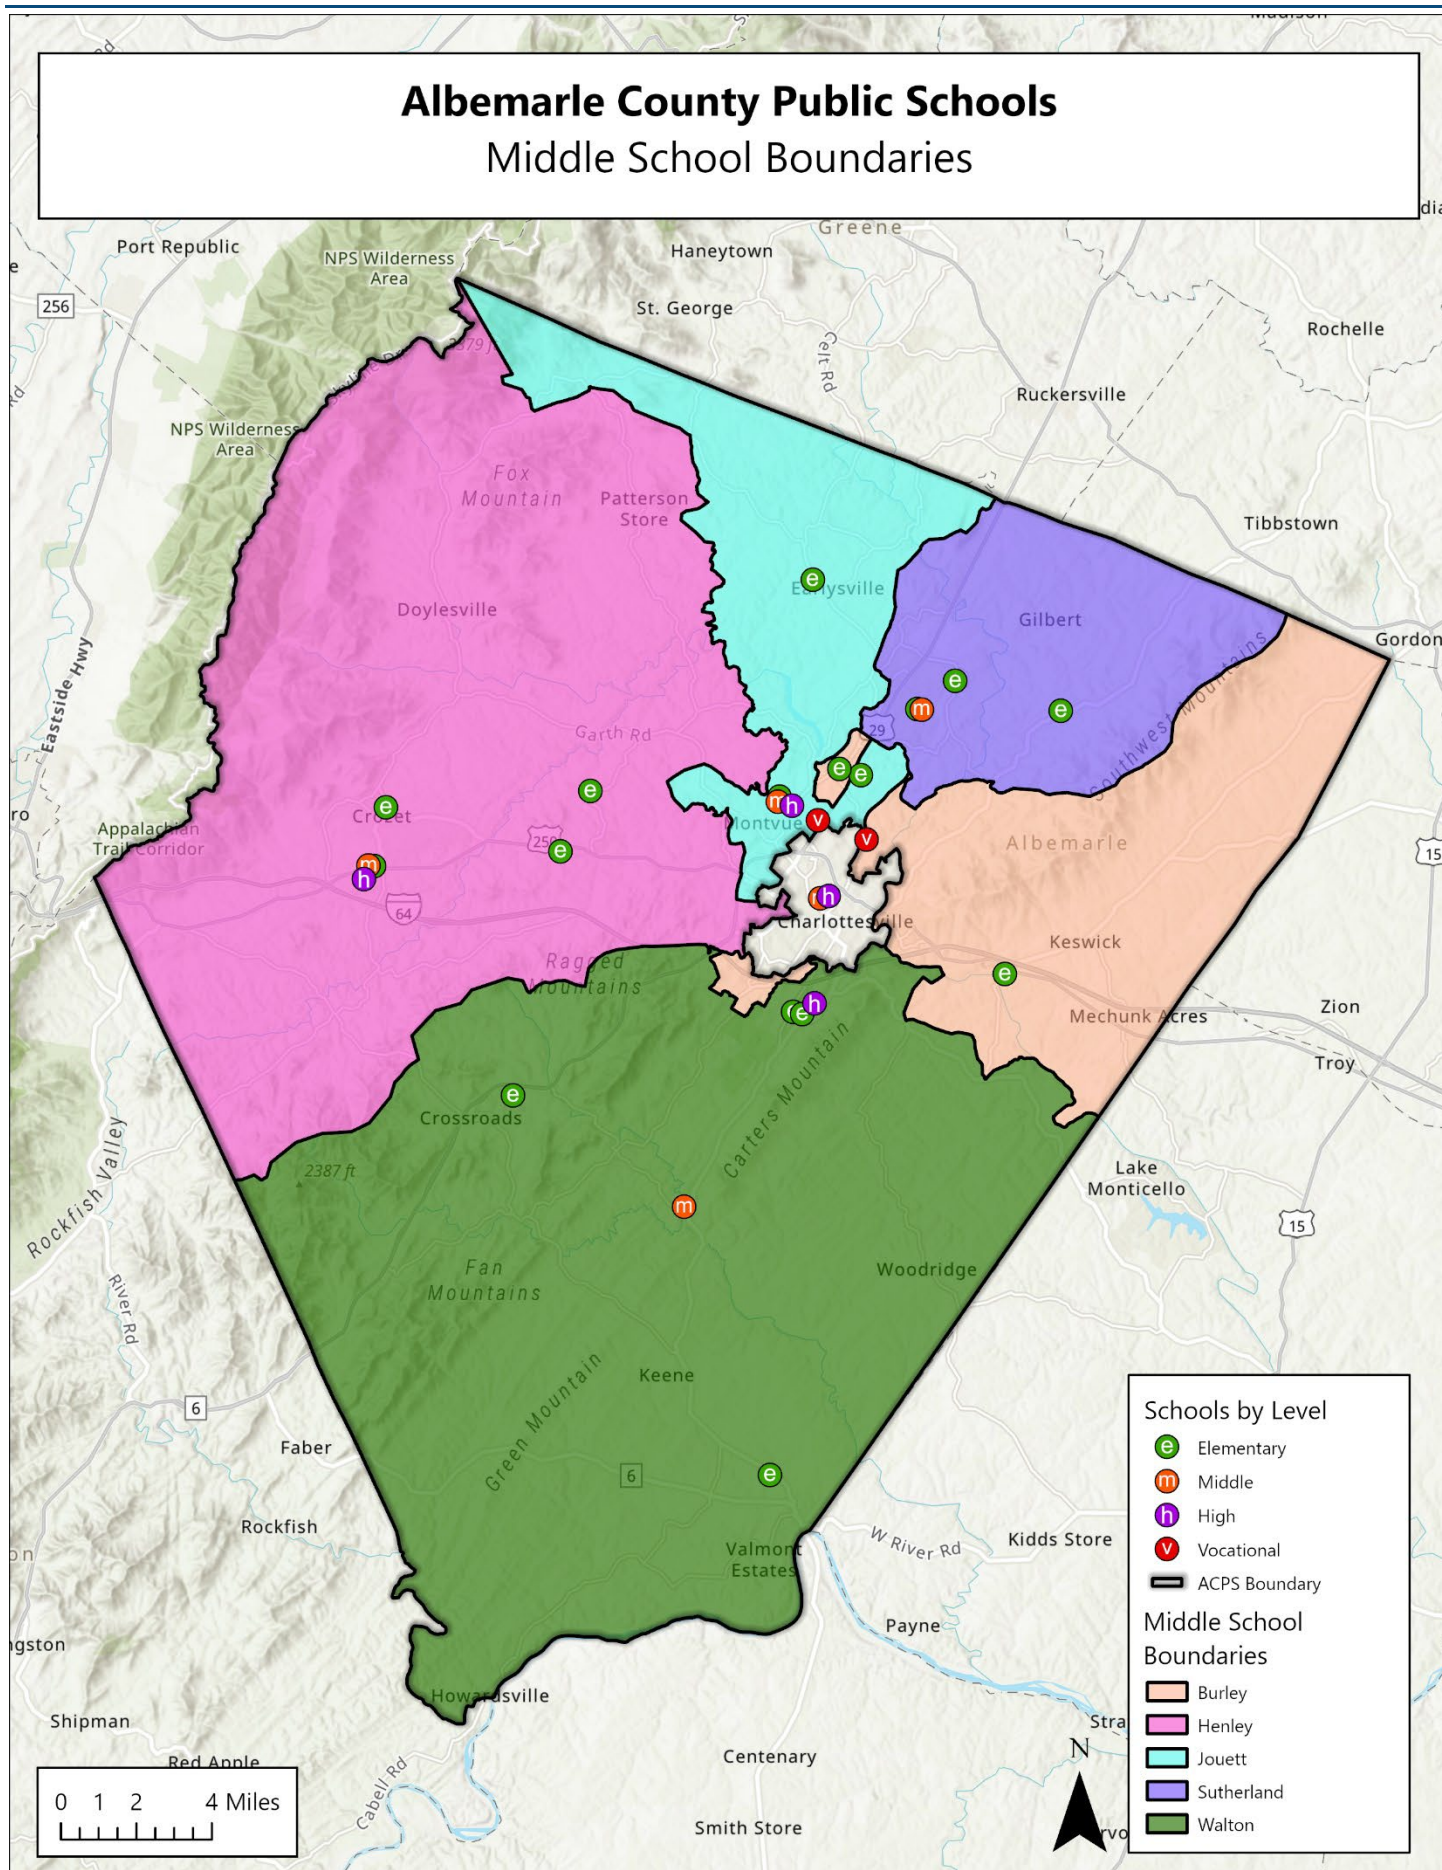

APPENDICES

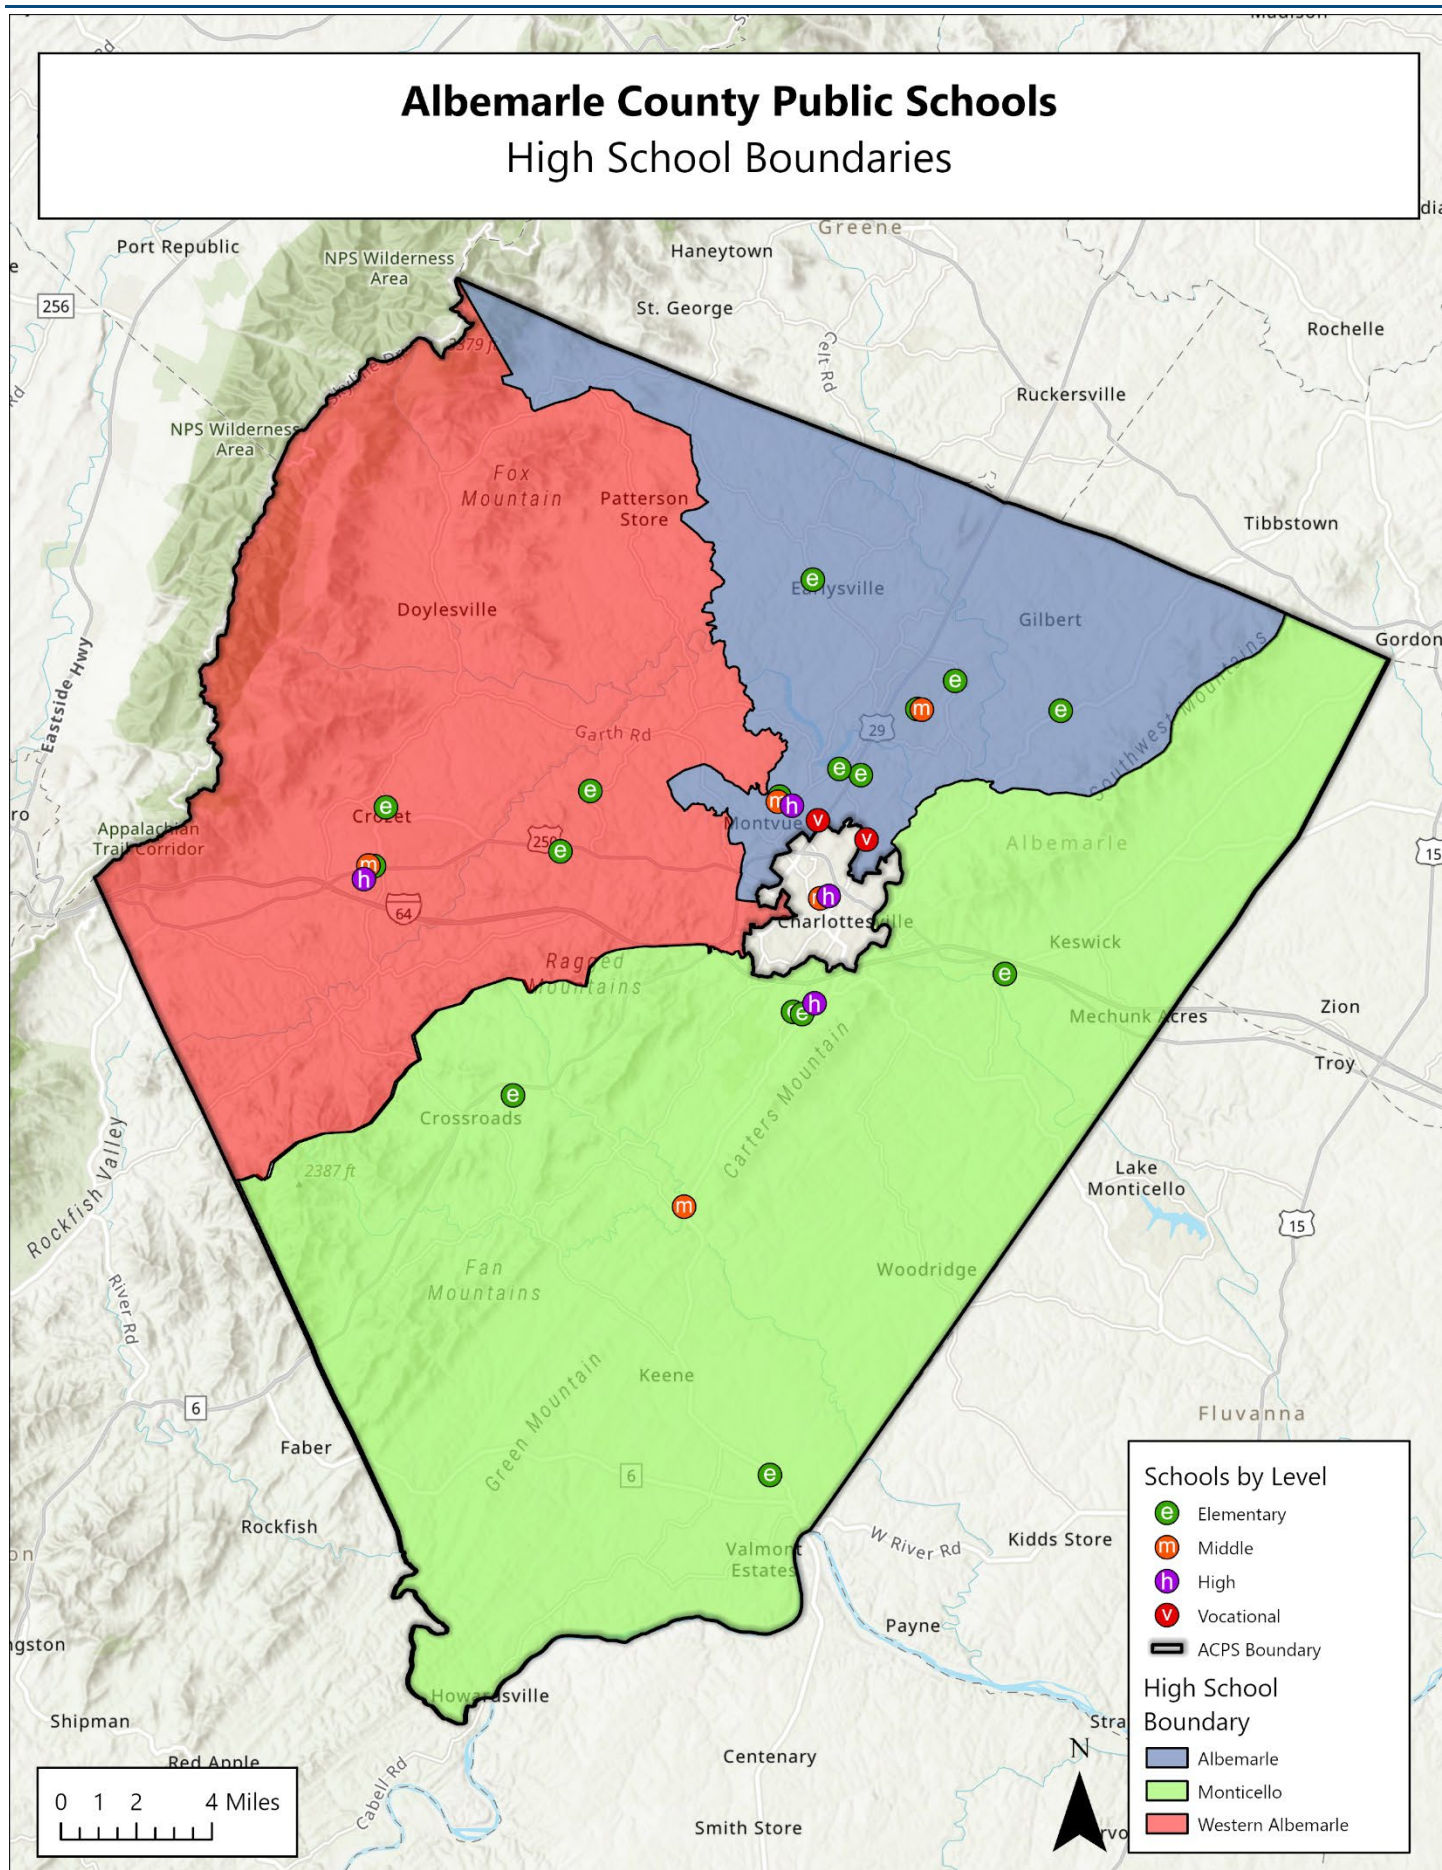

Appendix A – School Boundary Maps

The following maps illustrate the 2026-27 school boundaries in the Albemarle County Public Schools.

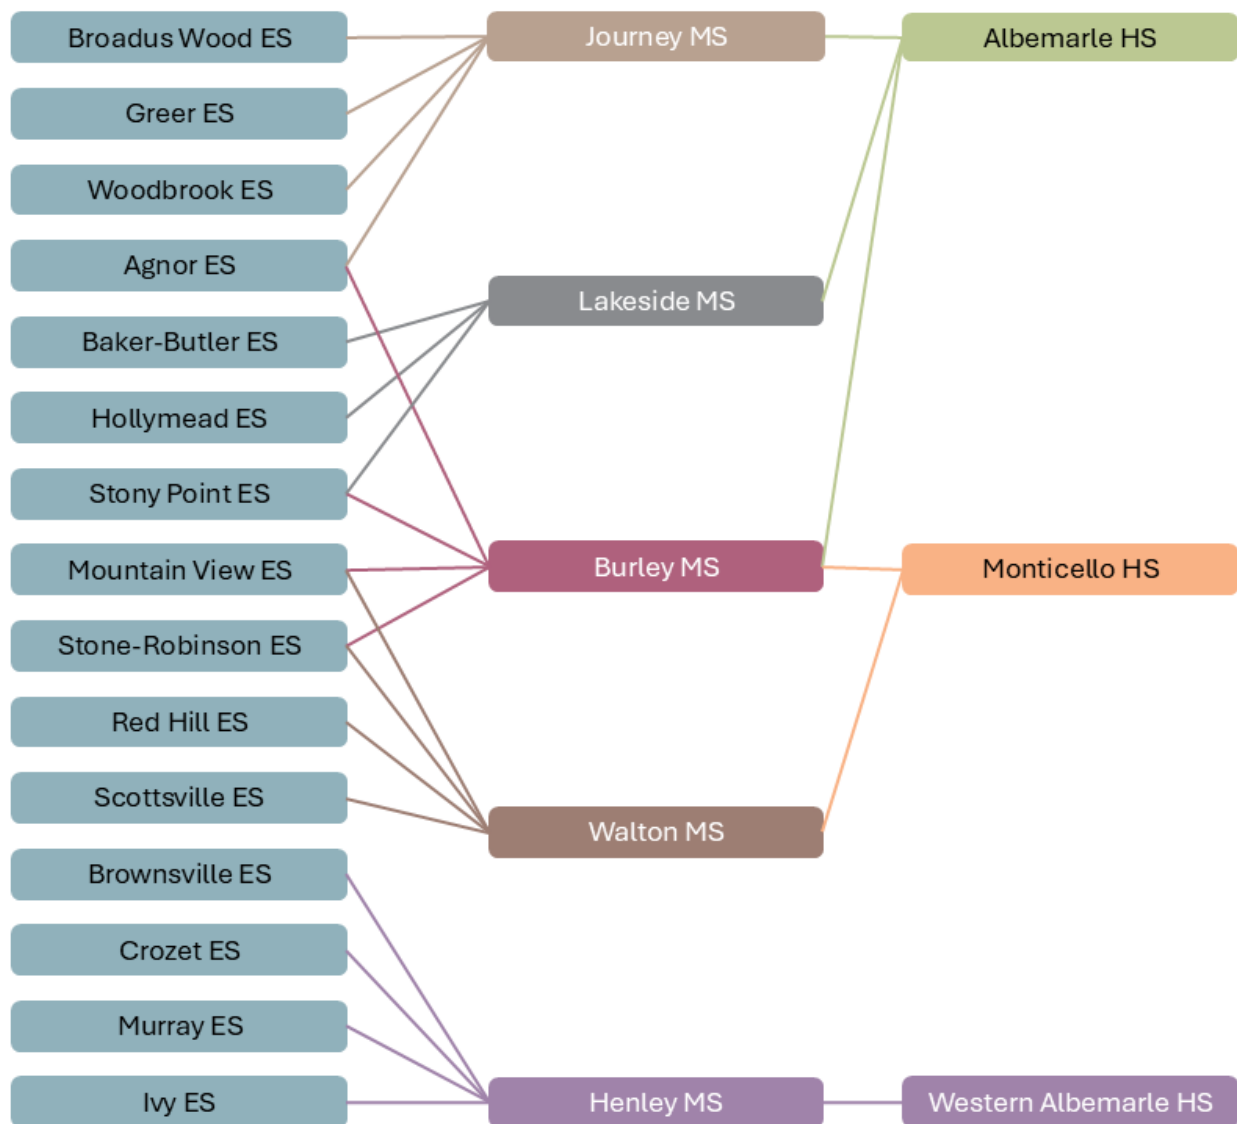

Appendix B – Feeder Flowchart

Appendix C – Live/Attend Analysis

The tables below and on the following page illustrate a live/attend analysis for the Albemarle County Public Schools. These tables cross-reference 2026-27 student enrollment and the current attendance zone in which students reside. The numbers in bold denote students who live in the boundary of and attend their zoned school. Transfer-in denotes the number of students who transfer into a school from outside of the attendance zone. Transfer-out denotes the number of students that leave their zoned school to attend another school. Out of Division indicates students who reside outside of the Division boundary.

Appendix D – Capacity and Utilization

The tables on the following pages show the program capacity for each school/grade band, and the current and projected utilization. The tables are color-coded based on the key below.

Utilization Color Key / Ranges

Under-Utilized	< 70%
Slightly Under-Utilized	70%-79%
Well-Utilized	80%-89%
Approaching Over-Utilization	90%-99%
Over-Utilized	100%-115%
Considerably Over-Utilized	> 115%

The capacity figures reflected on the following pages reflect program capacity provided by Albemarle County Public Schools for the 2026-27 school year. As program capacity is updated due to changing room use, these numbers should be updated accordingly.

Appendix E – Density Map

The map on the following page shows student density in the Albemarle County Public Schools. The darker blue areas indicate lower student density while the darker red areas indicate higher student density.
