ScreenBeam®

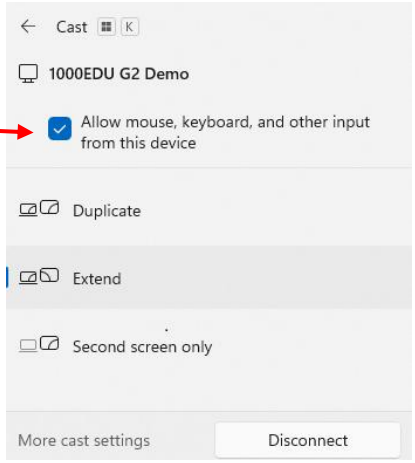

# Configuring your Windows Device to do Wireless Touch and Ink with ScreenBeam

Video Summary and Link to video: https://youtu.be/t0UPjC43LfU

This video provides a quick guide on configuring Windows devices for wireless annotation using ScreenBeam. Easily connect a Windows 10 laptop to a touch panel via ScreenBeam, enabling touch input from the device. This setup allows teachers to control their devices from anywhere in the classroom while students can interact with the touch screen.

Two simple steps:

1. **Connect to the ScreenBeam**
2. **Check "allow Keyboard, Mouse, Pen and Touch Input"**

**Video Highlights**:

00:35 **Enabling touch input**

- Check "allow keyboard, mouse, pen, and touch input"
- Ensures full touch screen functionality
- Important for interactive use

00:52 **Classroom application**

- Teachers can control devices remotely
- Students interact with the touch screen
- Enhances classroom engagement

01:31 **Final tips**

- Utilize existing tools on the laptop
- Ensure the screen is touch-enabled
- Maximize the setup's potential
