Postdoc Symposium 2026

Audio	Video
Hilansi Third annual Postdoctoral Research Symposium	Research symposium handouts displayed on a table
is a continuation of Postdoctoral Appreciation Week. And this symposium is all about showcasing postdoc's work. So it's a great way, you know, to showcase	Montage of many different postdocs standing at rows of posters in a large, open atrium talking about their work
what is their, like, you know, hard work and what what they are doing, basically.	Woman with shoulder length dark hair, wearing a rust colored shirt with tiny flowers standing in front of rows of posters Text: Hilansi Rawat, PhD President, PostDoc Association
So we organized some oral talks. So five postdocs, they participated, and they presented their research work.	Postdoc at podium in an auditorium with a large screen behind him, addressing an audience of his peers as they listen to his talk
And then now in the afternoon, we are having poster presentations where around 20 postdocs are participating and showcasing their, like, recent research updates. And we are very privileged to have like our	Montage of a variety of postdocs talking to faculty and others as they explain their current research findings
guest speaker or guest scientist. His name is Doctor Adam Feinberg. He is a pioneer in 3D bio materials and like 3D bioprinting. And he gave this amazing talk about all the cool stuff that he does in his lab.	Keynote speaker at podium in an auditorium with a screen behind him talking about bioprinting to an audience of postdocs who are listening to his presentation
And especially I would like to thank all the postdocs that are participating today. That they could give us some glimpse of their precious data. I really like this post doctoral community here because that is how we, you know, keep motivating each other. And that's how we know, okay, this postdoc is working on this. So if, if in case we want some help in a certain area of research, we can reach out to that post doc.	Open atrium full of posters with people in small groups lining each row. A variety of different postdocs stand in front of their posters to share their findings with faculty and colleagues
