Temas posibles/Possible Topics

- ***Programa dual para secundaria/*** *Middle School Dual Language Program*
- Estudiantes que tiene plan de aprendizaje individualizado/Students with IEPs
- Proyecto de Asignación Estudiantil/ Student Assignment Project

Here are some predictions

Rise of Augmented Reality

What's in store for us?

Real use cases of augmented reality include medical training, classroom education, business logistics, and the tourism industry.

Here are some predictions

It's time we see and engage with the world differently. Right now, we experience augmented reality through games, but there's a lot to it more than entertainment.

Future of Technology

Augmented reality is an emerging player in the tech economy. We can only expect further innovation and improvements in this area of communication.

03

Whole Brain Emulation

Whole Brain Emulation is a theoretical process of modelling an entire human brain on a computer in order to create an emulation of the mental state and turn it into a digital form.

Brain-Computer Interface

In the future, there will be a way to transfer memories, thoughts, knowledge and transform it into a digital form.

The technology will help preserve human knowledge and memories, thus providing a 'back-up' system for the future.

Digital Telepathy

In the future, there will be a way to automate transmission of information and knowledge through machine learning. With the technology rapidly evolving, the possibility is wide open to do telepathy digitally.

Auto Translation

No longer will you have to learn a foreign language to communicate with others. Presentations are communication tools that can be used as demonstrations, lectures, speeches, reports, and more. It is mostly presented before an audience.

Proliferation of Chat Bots

01

The automatic concept of communication do not have the intention to replace humans, rather to avoid the repetitive flow of communication. This way, humans are given the chance to focus on more valuable tasks.

02

Chat Bots are becoming more human-like and more convenient thanks to the rapid innovation of technology. The use of chat bots will move beyond simple information, it will move forward to more complex topics.

Electronic Paper

Electronic paper mimics the appearance of real paper. Electronic paper is said to be more environmentally friendly as it is reusable and eliminates paper waste.

Electronic paper is making human works a lot more flexible. With electronic paper, things are easy to search, copy, and modify.

"Communication is the process of distributing information. With technology constantly evolving, it's safe to say that communication will be conducted more quickly."

- Aaron Loeb
