

Lakeville AREA SCHOOLS

Student Learning in a Digital World Framework

At Lakeville Area Schools, we believe technology should support learning, not drive it. Our Digital Learning Framework reflects our shared beliefs about the intentional, balanced, and developmentally appropriate use of technology. Grounded in **Learning with Purpose** and **Learning with Care**, these principles guide how we make decisions, support teachers, and create learning experiences that help every student thrive.

Learning with Purpose

Using digital tools intentionally to strengthen teaching, learning, and student growth.

Meaningful Learning

Technology is aligned with **grade-level standards and learning goals**, balancing digital tools with hands-on experiences, collaboration and real-world application.

Emerging Tools & Academic Integrity

Emerging technologies are used **purposefully and ethically**, with **clear expectations** that protect academic integrity and encourage authentic student work.

Device & Learning Expectations

Clear, age-appropriate guidelines and classroom routines promote responsible device use, with **district-managed settings** supporting learning, accessibility and security.

Learning with Care

Creating safe, secure, accessible, and supportive digital environments where every student can thrive.

Digital Citizenship & Well-Being

PreK–12 instruction promotes **digital citizenship**, media literacy, ethical technology use, **healthy digital habits** and focused learning environments.

Safe & Secure Learning

District-managed devices, content filtering, approved apps and **built-in restrictions** help protect students, safeguard information and minimize distractions.

Equitable Access & Support

Students receive secure devices and online safety guidance, **staff** receive reliable technology and ongoing training, and **families** have access to clear expectations, resources and the Securly Parent app.

Technology is the tool, not the goal.
